Mendelian Genetics and Chi Square Teacher

S Phase: To produce two similar daughter cells, the complete DNA instructions in the cell must be duplicated. DNA replication occurs during this S (synthesis) phase. Gap 2 (G2): During the gap between DNA synthesis and mitosis, the cell will continue to grow and produce new proteins. At the end of this gap is another control checkpoint (G2 Checkpoint) to determine if the cell can now proceed to ...

The Cell Cycle - CELLS alive
Meiosis When organisms must produce sex cells, ones that are meant to be passed on to offspring, they go through a form of cell division called meiosis (MY-oh-sis). In meiosis, a cell goes through regular cell division but there is another step added to the end: the cell divides again. As a result the four
