Skeletal Injury in the Child | John A. Ogden | Springer

In trauma of the skeletal muscle the activation of the cell surface of endotheliocytes acquires a pathological pattern. Enhanced microvilli formation and clasmatosis lead to the formation of free emboli, which results in complete occlusion of the lumen of some vessels. Enhanced formation of microvilli leads to depletion of endotheliocytes, formation of transcellular channels, and necrosis of ...

2 Skeletal Trauma Springer

Skeletal trauma can be divided into three major groups of injuries to the musculoskeletal system: fractures, dislocations, and fracture/dislocations. A fracture is a disruption in the continuity of cortical and/or cancellous bone. A dislocation is a disruption of the normal articulating anatomy of a joint.
