The $30^\circ-60^\circ-90^\circ$ triangle is the only right triangle whose angles are in an arithmetic progression. The proof of this fact is simple and follows on from the fact that if $\theta, \theta + \alpha, \theta + 2\alpha$ are the angles then the sum of the angles $3\theta + 3\alpha = 180^\circ$. After dividing by 3, the angle $\theta + \alpha$ must be 60° .
