When replacing your brake pads

Access Free 98 Explorer Parking Brake Replacement

on your Ford Explorer, you first need to jack up the vehicle and remove the tire. This will give you access to the brakes. Locate the caliper, remove the two bolts and slide the caliper off. Inside the calipers are the brake pads. Pry out the outside brake pad off first,

Access Free 98 Explorer Parking Brake Replacement

then the inside pad. Then it's time to reverse the process!

98 Explorer Parking Brake
Replacement

The parking brake on a Ford
Explorer is cable-actuated and

Access Free 98 Explorer Parking Brake Replacement

requires no hydraulics. A simple pulley system engages when the parking brake is depressed, causing a tight, even clamp on the rotor to stop the car from moving. Parking brakes usually fail because the parking brake cable has rusted, stretched or

Access Free 98 Explorer Parking Brake Replacement

snapped.

How to Replace rear brake pads
on a Ford Explorer « Auto ...

When the parking brake isn't
used very much, the cable does
not move through its insulation. If
the parking brake is never used,

Access Free 98 Explorer Parking Brake Replacement

rust can build up inside the insulation and lock the cable in place. Then, when you try to engage the parking brake, you can feel the tension on the control, but there is no holding force at the brakes.
