In the most general sense, every algebra consists of a set (a set of numbers, a set of matrices, a set of switching components, or any other kind of set) and certain operations on that set. An operation is simply a way of combining any two members of a set to produce a unique third member of the same set.

About the Course. Algebra is the language of modern mathematics. This course introduces students to that language through a study of groups, group actions, vector spaces, linear algebra, and the theory of fields. In these free videotaped lectures, Professor Gross presents an array of algebraic concepts.

### **Abstract Algebra**

Traditionally, a first course in abstract algebra introduces groups, rings, and fields, in that order. In contrast, we have chosen to develop ring theory first, in order to draw upon the student's familiarity with integers and with polynomials, which we use as the motivating examples for studying rings.
