A History of Lighting Design: From Sunlight to Stage Light

An electric light is a device that produces visible light from electric power. It is the most common form of artificial lighting and is essential to modern society, providing interior lighting for buildings and exterior light for evening and nighttime activities. In technical usage, a replaceable component that produces light from electricity is called a lamp.

5 Light Machine Guns of World War One | History Hit

The theory behind neon sign technology dates back to 1675, before the age of electricity, when the French astronomer Jean Picard* observed a faint glow in a mercury barometer tube. When the tube was shaken, a glow called barometric light occurred, but the cause of the light (static electricity) was not understood at that time.
