Is it possible to make a perfect vacuum?

A vacuum is defined as a space devoid of all matter. In the Solar System, space contains on average five atoms per 1cm³. Interstellar space, between stars, contains around one atom per 1cm³, while intergalactic space, between galaxies, contains 100 times less. Ultimately, a perfect vacuum isn't possible because quantum theory dictates that energy fluctuations known as 'virtual particles' are constantly popping in and out of existence, even in 'empty' space.
