Detailed Description. The functions in
this section use a so-called pinhole
camera model. The view of a scene is
obtained by projecting a scene's 3D point
 $\backslash(P_w\backslash)$ into the image plane using a
perspective transformation which forms
the corresponding pixel $\backslash(p\backslash)$.

5.1.3 Stateless. We next add a constraint to the client-server interaction: communication must be stateless in nature, as in the client-stateless-server (CSS) style of Section 3.4.3 (), such that each request from client to server must contain all of the information necessary to understand the request, and cannot take advantage of any stored context on the server.

Perspective (graphical) - Wikipedia

Constraint satisfaction problems (CSPs) are mathematical questions defined as a set of objects whose state must satisfy a number of constraints or limitations. CSPs represent the entities in a problem as a homogeneous collection of finite constraints over variables, which is solved by constraint satisfaction methods. CSPs are the subject of intense research in both artificial intelligence
