Magnetoreception - Wikipedia

Some researchers believe the answer lies deep within the brain, embodied by an actual "sense" of direction that can be resurrected and trained. For instance, in 1981, R. Robin Baker, Ph.D., a biologist at the University of Manchester, England, reported that blindfolded subjects, when transported to a distant site, could indicate the direction home.

Some species may only be able to sense a magnetic compass to find north and south, while others may only be able to discern between the equator and the pole. Although the ability to sense direction is important in migratory navigation, many animals also have the ability to sense small fluctuations in earth's magnetic field to compute coordinate maps with a resolution of a few kilometers or better. [70]
