Adding and Subtracting Rational Expressions: Examples

Simplify or reduce the rational expression if you can. Remember to reduce rational expressions the factors must be exactly the same in both the numerator and denominator. Click on the link if you review the steps for Simplifying Rational Expressions.

Adding & Subtracting Rational Expressions

To add or subtract rational expressions with the same denominators: Add or subtract the numerators as indicated. Keep the common denominator. Simplify the resulting rational expression if possible. Example 1. Simplify  $\frac{2x+3}{x^2-4} + \frac{5}{x^2-4}$ . Example 2. Simplify  $\frac{3x-1}{x^2-9} - \frac{2}{x^2-9}$ . To add or subtract rational expressions with different denominators: Completely factor each denominator.

Adding And Subtracting Rational Expressions

Addition and subtraction are the hardest things you'll be doing with rational expressions because, just like with regular fractions, you'll have to convert to common denominators. Everything you know about adding fractions, you're going to hate worse with rational expressions.

Rational Expressions: Adding and Subtracting. Ex 1

Adding and subtracting rational expressions is identical to adding and subtracting with integers. Recall that when adding with a common denominator we add the numerators and keep the denominator the same. This is the same process used with rational expressions. Remember to reduce, if possible, your final answer. Example 1.
