cells (ASCs) are adult multipotent cells with homing, immunomodulation, promotion of tissue repair and regeneration properties. Moreover, their clinical use, unlike embryonic stem cells, is less associated with ethical controversies being harvested from autologous adult fat.

**Adipose-Derived Stem Cells - Methods and Protocols ...**  
Adipose-derived stem cells are recognized as being an effective mesenchymal stem cell population with enormous potential in different fields of regenerative medicine and stem cell therapy. Although there is unanimous agreement on the harvesting procedure for adipose tissue, there are various protocols for adipose-derived stem cell isolation.

## **Adipose-Derived Stem Cells: Methods and Protocols (Methods ...**

Adipose-derived stem cells (ASCs) are multipotent cells in adipose tissue with characteristics similar to those of BMSCs [4, 10]. However, in contrast to the invasive procedure needed to harvest BMSCs and their low yields, ASCs are easy to harvest and there is minimal donor morbidity.

Foremost among fat's virtues is its richness of stem cells, which have the ability to divide and grow into a wide variety of tissue types. Fat stem cells — also known as adipose-derived stem cells — can be coerced to grow into bone, cartilage, muscle tissue or, of course, more fat. Multipurposes

Zuk et al. described how mesenchymal stem cells from adipose tissue could be derived through enzymatic digestion. The product of adipose tissue digestion and centrifugation is the SVF, which is a heterogeneous population of cells containing MSCs as well as leukocytes, fibroblasts, endothelial cells, and macrophages (Eto et al., 2009 ; Schaffler & Buchler, 2007 ).

Adipose-derived stem cells are multipotent, undifferentiated, and self-renewing. They are morphologically and phenotypically similar to other MSCs. Because obtaining adipose cells is a minimally invasive procedure, and the proliferation capacity does not decline with age, they have been proven superior to bone marrow-derived stem cells by many researchers.
