### Forget Global Warming, The Sun Says An Ice Age Is Coming ...

A large fraction of the Earth's fresh water is frozen: It's stored in glaciers all around the world, and in both the Greenland and Antarctic ice sheets. When this ice melts or calves off, the water flows into the oceans and sea levels rise. If all glaciers and ice sheets melted, global sea level would rise by more than 195 feet (60 meters). NASA continuously measures the weight of glaciers ...
