Results indicate that healthy aging is perceived within the context of everyday life, and interviewees who are content with their health often have an assets-based and positive view on health. Often, however, interventions and facilities address isolated health themes, and such an approach does not match well with these perceptions.

Busy Bodies: Activity, aging, and the management of ...

The other factor influencing today's aging prison population is the aging of the overall population. As discussed in the section on aging in the United States, the percentage of people over sixty-five years old is increasing each year due to rising life expectancies and the aging of the baby boom generation.
