Most gas turbines are internal combustion engines but it is also possible to manufacture an external combustion gas turbine which is, effectively, a turbine version of a hot air engine. Those systems are usually indicated as EFGT (Externally Fired Gas Turbine) or IFGT (Indirectly Fired Gas Turbine).

AIRCRAFT GAS TURBINE ENGINE TECHNOLOGY TRAEGER PDF
The history of the aircraft gas turbine engines is the history of advanced material development specifically aimed at improving gas turbines: some highly successful examples include forged titanium alloys (now widely used in aircraft structure as well), several nickel superalloys, single-crystal turbine airfoils, 9 forged high-temperature powder metal alloys, coatings for environmental protection and for thermal barriers, and, most recently, titanium aluminides. There are few applications ...
