Airplanes Take Off and Land (PTM Werks): Patrick T ...

Aircraft can have different ways to take off and land. Conventional airplanes accelerate along the ground until sufficient lift is generated to takeoff, and reverse the process to land. Some airplanes can take off at low speed, this being a short takeoff. Some aircraft such as helicopters and Harrier Jump Jets can take off and land vertically. Rockets also usually take off vertically, but some designs can land horizontally.

Can planes land by themselves? A look at aircraft ...

Aircraft want to take off and land into a headwind as this reduces the distance they require to get airborne or distance need to bring the aircraft to a stop. If an aircraft is standing still on the runway, and has a headwind component of 20kts, that's 20kts of air flowing over the wing and therefore giving the aircraft an airspeed of 20kts, even though it's not moving.
