Factoring Review

Factor: rewrite a number or expression as a product of primes; e.g. $6 = 2 \cdot 3$ In algebra, factor by rewriting a polynomial as a product of lower-degree polynomials In the example above, $(x + 1)(x - 2)$ is the factored form of $x^2 - x - 2$ (multiply to verify!)

PDF Algebra 2

Factoring Quadratics is

very similar to

multiplying binomials,

just going the other

way. For example,

x^2+3x+2 factors to

$(x+1)(x+2)$ because

$(x+1)(x+2)$ multiplies to

x^2+3x+2 . This article

reviews the basics of

how to factor

quadratics into the

product of two

binomials.
