equivalent if  $\text{Sol}(S;K) = \text{Sol}(S_0;K)$  for any  $k$ -algebra  $K$ . An equivalence class is called an algebraic variety over  $k$  (or an algebraic  $k$ -variety). If  $X$  denotes an algebraic  $k$ -variety containing a system of algebraic equations  $S$ , then, for any  $k$ -algebra  $K$ , the set  $X(K) = \text{Sol}(S;K)$  is well-defined. It is called the set of  $K$ -points of  $X$ .

Introduction to Algebra - ed2go

Introduction to Algebra. Algebra sounds like a difficult concept, and you may have heard that it is from an older sibling or parent. Don't worry-- it's not hard at all. The basic idea is that we have an equation that is balanced on both sides. Picture a scale in your head with the same values on each side, and you have a basic understanding of algebra.

An Introduction to Commutative Algebra and Number Theory is an elementary introduction to these subjects. Beginning with a concise review of groups, rings and fields, the author presents topics in algebra from a distinctly number-theoretic perspective and sprinkles number theory results throughout his presentation.

Introduction to Algebraic Geometry

An introduction to geometry. A point in geometry is a location. It has no size i.e. no width, no length and no depth. A point is shown by a dot. A line is defined as a line of points that extends infinitely in two directions. It has one dimension, length. Points that are on the same line are called collinear points. A line is defined by two...
