The Radiology Assistant : Head/Neck

The neck is the start of the spinal column and spinal cord. The spinal column contains about two dozen inter-connected, oddly shaped, bony segments, called vertebrae. The neck contains seven of ...

Cervical Spine Anatomy (Neck)

The human head is an anatomical unit that consists of the skull, hyoid bone and cervical vertebrae. The term "skull" collectively denotes the mandible (lower jaw bone) and the cranium (upper portion of the skull that houses the brain). The skull can also be described as being composed of the cranium, which encloses the cranial cavity, and the facial skeleton (includes the mandible).

C1, C2, and C3 (the first three cervical nerves) help control the head and neck, including movements forward, backward, and to the sides. 1 The C2 dermatome handles sensation for the upper part of the head, and the C3 dermatome covers the side of the face and back of the head. 2 (C1 does not have a dermatome.) See The C1-C2 Vertebrae and Spinal ...

Head and neck anatomy - Wikipedia

The neck muscles, including the sternocleidomastoid and the trapezius, are responsible for the gross motor movement in the muscular system of the head and neck. They move the head in every direction, pulling the skull and jaw towards the shoulders, spine, and scapula. Working in pairs on the left and right sides of the body, these muscles ...

Nerves and arteries of head and neck: Anatomy, branches ...

At birth, the newborn's skull consists of five major bones (two frontal, two parietal, and one occipital) that are separated by connective tissue junctions known as cranial sutures.[1] The sutures function as seams, and they are highly necessary to facilitate the movement and molding of the cranium through the birth canal during labor. They also allow for rapid postnatal growth and development ...
