Answer Sheet - The Washington Post

Signal Transduction Definition. Signal transduction is the process of transferring a signal throughout an organism, especially across or through a cell. Signal transduction relies on proteins known as receptors, which wait for a chemical, physical, or electrical signal. Chemical signals are called ligands, and can be produced by organisms to control their body or received from the environment.

Your Career: The Journey Starts Here

Key Points We all tend toward one leadership style more than another, due to our personal preferences, abilities, role models, and more. But one approach doesn't fit all scenarios: some situations and people call for a fast, firm, top-down approach, while others flourish with shared responsibilities and the freedom to plan, decide and act.
