COMMON LISP An Interactive Approach ... V APPENDICES 259 A Solutions to Selected Exercises 261 ... Common Lisp is still obviously a dialect of Lisp, the quantitative additions of functions and features have made a qualitative difference. Besides the obvious, well-known, and pervasive change from dynamic scoping to lexical ...

Appendices A. The LISP functions of DCAT

A function is a group of statements that together perform a task. You can divide up your code into separate functions. How you divide up your code among different functions is up to you, but logically the division usually is so each function performs a specific task. Defining Functions in LISP. The macro named defun is used

LISP 1.5 Programmer's Manual - Computer Science and ...

Function APPEND. Syntax: append &rest lists => result. Arguments and Values: list---each must be a proper list except the last, which may be any object. result---an object. This will be a list unless the last list was not a list and all preceding lists were null. Description: append returns a new list that is the concatenation of the copies.

COMMON LISP An Interactive Approach - University at Buffalo

the online Visual Lisp Developer's Guide, in Appendix A -- AutoLISP Function Synopsis / Basic Functions / String-Handling Functions, and I am looking at the "subst" function. The description states "Returns a substring of a string." So I click on "subst" and the description for the function that comes up

An Introduction to Programming in Emacs Lisp

Lists in LISP. The list function is rather used for creating lists in LISP. The list function can take any number of arguments and as it is a function, it evaluates its arguments. The first and rest functions give the first element and the rest part of a list. The following examples demonstrate the concepts.

LISP - Functions - Tutorialspoint

Common Lisp uses the word "function" to mean "procedure," whether or not the procedure implements a function. This is a lot like apply, you may have noticed. Look at the difference: common-lisp> (funcall #' + 1 2 3) 6 common-lisp> (apply #' + '(1 2 3)) 6 In the first case, each argument to + is a separate argument to funcall.

The Visual LISP Developers Bible - Autodesk

XLISP is an experimental programming language combining some of the features of Common Lisp with an object-oriented extension capability. It was implemented to allow experimentation with object-oriented programming on small computers. Implementations of XLISP run on virtually every operating system.

Appendices A The Lisp Functions

Appendices A. The LISP functions of DCAT In this appendix we present the definitions of the parser DCAT/DLEX. The definitions are written in the programming language LISP and implement the left-associative grammar of German explained in chapters 3 and 4 as a computer program.

Appendix A NewLisp Versus Common Lisp - Springer

A function whose value is either true or false is called a predicate. In LISP, the values true and false are represented by the atomic symbols T and F, respectively. A LISP predicate is therefore a function whose value is either T or F. The predicates is a test for equality on atomic symbols. It is undefined for non-atomic arguments. Examples

Appendix 3: XLISP: An Object-oriented Lisp

A possible function of the human appendix is a "safe house" for beneficial bacteria in the recovery from diarrhea. Although it has been long accepted that the immune tissue surrounding the appendix and elsewhere in the gut-called gut-associated lymphoid tissue-carries out a number of important functions, ...

CLHS: Function APPEND - Lisp

The Lisp callback function's address is placed from within Lisp into a variable in the dll. Lisp provides an interactive and rich programming environment. The judicious use of macros to create language extensions in Lisp concentrates application-specific information into small local areas of the overall system.

AutoLISP documentation errors - Autodesk Community

Appendix A. Frequently Asked Questions (With Answers) about CLISP. All the legitimate technical questions are addressed in the CLISP documentation (CLISP impnotes , clisp (1), clisp-link (1)), and for such questions this list provides a link into the docs. The frequently asked political questions are answered here in full detail (meaning that no further explanations of the issues could be provided).

Appendix (anatomy) - Wikipedia

setf may be used with each of these functions to store into the indicated position of a list. [Function] rest list. rest means the same as cdr but mnemonically complements first. setf may be used with rest to replace the cdr of a list with a new value. [Function] nthcdr n list (nthcdr n list) performs the cdr operation n times on list, and returns the result. For example:
