Linguistics is the scientific study of language. It encompasses the analysis of every aspect of language, as well as the methods for studying and modelling them. The traditional areas of linguistic analysis include phonetics, phonology, morphology, syntax, semantics, and pragmatics. Each of these areas roughly corresponds to phenomena found in human linguistic systems: sounds (and gesture, in ...

Introduction. Affixation is a morphological process whereby a bound morpheme, an affix, is attached to a morphological base. Diachronically, the English word affix was first used as a verb and has its origin in Latin: affixus, past participle of the verb affigere, ad- 'to' + figere 'to fix'.Affixation falls in the scope of Morphology where bound morphemes are either roots or affixes.

Polysemy is characterized as the phenomenon whereby a single word form is associated with two or several related senses. It is distinguished from monosemy, where one word form is associated with a single meaning, and homonymy, where a single word form is associated with two or several unrelated meanings. Although the distinctions between polysemy, monosemy, and homonymy may seem clear at an ...

Polysemy | Oxford Research Encyclopedia of Linguistics

In linguistics, a speech act is an utterance defined in terms of a speaker's intention and the effect it has on a listener. Essentially, it is the action that the speaker hopes to provoke in his or her audience. Speech acts might be requests, warnings, promises, apologies, greetings, or any number of declarations.

Ferdinand de Saussure (1857-1913), the founding figure of modern linguistics, made his mark on the field with a book he published a month after his 21st birthday, in which he proposed a radical rethinking of the original system of vowels in Proto-Indo-European. A year later, he submitted his doctoral thesis on a morpho-syntactic topic, the genitive absolute in Sanskrit, to the University of ...
