## Applied Partial Differential Equations.

The initial condition is  $u(x,0) = 0$  and the boundary condition is  $u(0,t) = n_0$ . To solve the equation go to characteristic coordinates  $\xi = x - ct$  and  $\eta = t$ . Then the PDE for  $N = N(\xi, \eta)$  is  $N_\eta = \eta_r N$ . Separate variables and integrate to get  $2 \eta N = \eta_r \eta + \eta(\eta)$ .
