## Design with Daylight: Natural Lighting

One of the most basic natural lighting techniques in architecture is the placement of windows, and it can also impact the energy efficiency of your home. South-facing windows maximize natural light, especially in the winter when you want the heat from the sun. Windows on the west and east side of your home give you lots of direct natural light, but they also heat up your home in the summer, which can increase cooling bills.

## Natural Light | MIT Architecture

Shelter and natural light are fundamental elements of architecture. The first is concerned with protection from natural elements; the second with the creative and sometimes spiritual interaction between the man-made and the natural worlds. One is solid and static, the other illuminates and animates.
