Wind on Rooftop Structures and Equipment -
Article - Meca ...

The Generate Semi-Rigid Diaphragm Loads option generates wind loads for BLC's using windward and leeward direction loads prescribed by the ASCE 7-16 (WLX+Z, WLX-Z, WLZ+X, WLZ-X). Seismic Options The third tab of the Load Combination Generator is the Seismic tab.

Chapter 3: Design Loads for Residential Buildings

ASCE 7 has a method for calculating wind loads on rooftop Structures and equipment for buildings, and this article will describe that method. Fortunately, the method is relatively straight forward, not too complicated, and is covered in ASCE 7-16 Section 29.4.1

Asce 7 10 Wind Loads

At this point the snow loads are ready for analysis in conjuncture with other load cases and load combinations based on ASCE 7-10 and other pertinent building codes. Make sure to read through Chapter 7 of ASCE 7-10 for more information about successive provisions for partial snow loading and unbalanced snow loading, as those conditions were not ...

Calculating and Applying Roof Snow Drift Loads w/ ASCE 7-10

wind load provisions of ASCE 7-98 include
