Global IPv6 traffic has grown more than 5000% since World IPv6 Launch began on 6 June 2012, with some networks now reporting 80 or 90% deployment of IPv6! (See our measurements .) Organized by the Internet Society, and building on the successful one-day World IPv6 Day event held on 8 June 2012, World IPv6 Launch represents a major milestone in the global deployment of IPv6.

IPv6 test - IPv6 vs. IPv4 broadband speed test

For years, we've known the limitations of IPv4, and these limitations were what stimulated the development of IPv6 as early as the 1990s (though it wasn't in commercial deployment until 2006). Despite this long-lead knowledge of where IPv4 would fall short and its 2.0 version, IPv6, being this long, only 16.3 percent of the top 1,000 websites have enabled IPv6 (according to Alexa).

What is IPv6, and why aren't we there yet? | Network World

Follow these steps to enable IPv6 on your Windows 10 computer: On the Start screen, type Control Panel.; Press Enter.; Select Network and Internet.; Select Setup a new connection or network. Next.; On the left side of the Network and Sharing Center, select Change Adapter Settings.; Right-click your network connection.; Select Properties.; Scroll to Internet Protocol version 6.
