replaced, the wealth of data and research remain.

Avian Malaria Parasites and Other Haemosporidia. By ... Little is known of other avian malaria parasite populations, but analysis of a taxonomically conservative subset of *P. lucens* AMA1 from a population of olive sunbirds (*Cyanomitra olivacea*) in Cameroon (Lauron et al., 2014) is consistent with our finding that genetic diversity in the avian parasites is lower than both *P. vivax* (Figtree et al., 2000; Grynberg, Fontes, Hughes, & Braga, 2008) and ...

Population structure of avian malaria parasites ... Prevalence. We detected avian blood parasites in 129 of the 186 northwestern crows sampled; apparent prevalence of

Avian malaria is a parasitic disease of birds, caused by parasite species belonging to the genera Plasmodium and Hemoproteus (phylum Apicomplexa, class Haemosporidia, family Plasmoiididae). The disease is transmitted by a dipteran vector including mosquitoes in the case of Plasmodium parasites and biting midges for Hemoproteus. The range of symptoms and effects of the parasite on its bird hosts ...

Prevalence and diversity of avian blood parasites in a ...
Malaria parasites and related haemosporidian parasites are widespread and may cause severe diseases in birds. These pathogens should be considered in projects aiming breeding of birds for purposes of sustained ex situ conservation. Cranes are the ' flagship species ' for health assessment of wetland ecosystems, and the majority of species are endangered. Malaria parasites and other ...

avian malaria and avian malaria–like haemosporidian parasites are seldom investigated in endangered birds. We stress the importance of assessing the occurrence of haemosporidians and other parasites in vertebrate species of high conservation concern.

Avian Malaria Parasites and Other Haemosporina

Avian malaria, also called bird malaria, infectious disease of birds that is known particularly for its devastation of native bird populations on the Hawaiian Islands. It is similar to human malaria in that it is caused by single-celled protozoans of the genus *Plasmodium* and is transmitted through the bite of infected mosquitoes .
