Balancing chemical equations - How to Balance Chemical Equations Easily ...

It is common practice to use the smallest possible whole-number coefficients in a chemical equation, as is done in this example. ... Balancing Equations. The chemical equation described in section 4.1 is balanced, meaning that equal numbers of atoms for each element involved in the reaction are represented on the reactant and product sides ...

Practice Balancing Chemical Equations - ThoughtCo

Balancing chemical equations involves the addition of stoichiometric coefficients to the reactants and products. This is important because a chemical equation must obey the law of conservation of mass and the law of constant proportions, i.e. the same number of atoms of each element must exist on the reactant side and the product side of the equation.
