When you name an element in your Visual Basic application, the first character of that name must be an alphabetic character or an underscore. Note, however, that names beginning with an underscore are not compliant with the Language Independence and Language-Independent Components (CLS). The following suggestions apply to naming.

Naming Conventions - Visual Basic | Microsoft Docs

In this article. Visual Basic loop structures allow you to run one or more lines of code repetitively. You can repeat the statements in a loop structure until a condition is True, until a condition is False, a specified number of times, or once for each element in a collection.. The following illustration shows a loop structure that runs a set of statements until a condition becomes true:
