The biology of Zika virus. Video transcript. ... Because viruses that attack bacteria might-- sometimes the bacteria is far worse for the virus-- but these are called bacteriophages. And I've already talked to you about how they have their DNA. But since bacteria have hard walls, they will just inject the DNA inside of the bacteria. ...

Biology 2 Viruses Flashcards | Quizlet

The biggest difference between viruses and bacteria is that viruses must have a living host - like a plant or animal - to multiply, while most bacteria can grow on non-living surfaces. Bacteria are intercellular organisms (i.e. they live in-between cells); whereas viruses are intracellular organisms (they infiltrate the host cell and live inside the cell).

Differences Between Bacteria and Viruses
