Concepts of Biology - Open Textbook Library

Evolutionary biology is the subfield of biology that studies the evolutionary processes (natural selection, common descent, speciation) that produced the diversity of life on Earth. Simply, it is also defined as the study of the history of life forms on Earth. Evolution is based on the theory that all species are related and they gradually change over time.

Evolutionary biology - Wikipedia

In evolutionary biology, a spandrel is a phenotypic trait that is a byproduct of the evolution of some other characteristic, rather than a direct product of adaptive selection. Stephen Jay Gould and Richard Lewontin brought the term into biology in their 1979 paper "The Spandrels of San Marco and the Panglossian Paradigm: A Critique of the Adaptationist Programme".
