#### Understanding Shock IV: Bleeding Control - EMS Basics

Emergency bleeding control describes actions that control bleeding from a patient who has suffered a traumatic injury or who has a medical condition that has caused bleeding. Many bleeding control techniques are taught as part of first aid throughout the world, though some more advanced techniques such as tourniquets, are often taught as being reserved for use by health professionals, or as an absolute last resort, to mitigate associated risks, such as potential loss of limbs. To manage bleeding

#### Emergency bleeding control - Wikipedia

Bleeding control and shock management should NOT be the random basic skill. Presently, there is no universally accepted method of applying a tourniquet. Also, there is no way to test this skill on a human subject (like we do for spinal immobilization seated/supine) because you would be applying and removing tourniquets so many times, it would not be a fun experience for the guy playing patient.
