Blood And Marrow Transplant Handbook

The European Society for Blood and Marrow Transplantation (EBMT) is a non-profit organisation that was established in 1974 to allow scientists and physicians involved in clinical bone marrow transplantation to share their experiences and develop co-operative studies.

HFE - Overview: Hemochromatosis HFE Gene Analysis, Blood

Amyloid light chains (AL) amyloidosis is a systematic disorder caused by an abnormality in white blood cells (plasma cells) of the bone marrow. As a result of this bone marrow disorder, misfolded, amyloid proteins are formed and deposited in and around tissues, nerves and organs.

The EBMT | EBMT

The bone marrow functions as a factory that manufactures three kinds of blood cells: red blood cells, white blood cells, and platelets. Healthy bone marrow produces immature blood cells — called stem cells, progenitor cells, or blasts — that normally develop into mature, fully functional red blood cells, white blood cells, and platelets.
