Cartesian basis and related terminology Vectors in three dimensions. In 3d Euclidean space, \mathbb{R}^3 , the standard basis is e_x, e_y, e_z . Each basis vector points along the x -, y -, and z -axes, and the vectors are all unit vectors (or normalized), so the basis is orthonormal.. Throughout,

Note that the above transformations also apply to vectors. You will also recall that $R^{-1}x = R^T x$ $R^{-1}y = R^T y$ $R^{-1}z = R^T z$ This means in particular that these matrices are orthogonal. It can also be proven that the product of two orthogonal matrices is itself an orthogonal matrix (see problems at the end of the chapter). So, if we combine ...
