EBK PRECALCULUS W/LIMITS 4th Edition Answers
| bartleby

The directional derivative of a scalar function $f(x, y, z)$ along a vector $\mathbf{u} = (u_x, u_y, u_z)$ is the function defined by the limit $\lim_{h \rightarrow 0} \frac{f(x + hu_x, y + hu_y, z + hu_z) - f(x, y, z)}{h}$. This definition is valid in a broad range of contexts, for example where the norm of a vector (and hence a unit vector) is undefined.. For differentiable functions. If the function f is differentiable at \mathbf{x} , then the directional derivative exists along any

Diploma in Computer Science Syllabus and Subjects - GetMyUni

A contour line (also isoline, isopleth, or isarithm) of a function of two variables is a curve along which the function has a constant value, so that the curve joins points of equal value. It is a plane section of the three-dimensional graph of the function $(,)$ parallel to the $(,)$ -plane. More generally, a contour line for a function of two variables is a curve connecting points where the ...
