A bstract. We present a detailed analysis of the thermodynamics of exact asymptotically flat hairy black holes in Einstein-Maxwell-dilaton theory. We compute the regularized action, quasilocal stress tensor, and conserved charges by using a 'counterterm method' similar to the one extensively used in the AdS-CFT duality.

Callen does a pretty good job of putting together a consistent theory of thermodynamics from first principles. My difficulty with thermodynamics is often that they tend to pull results out of nowhere, either based on problems I didn't do or assumed knowledge of some obscure combinations of partial derivatives and identities.
