Chemotherapy involves the use of drugs to destroy cancer cells.

Although an ideal drug would destroy cancer cells without harming normal cells, most drugs are not that selective. Instead, drugs are designed to inflict greater damage on cancer cells than on normal cells, typically by using drugs that affect a cell's ability to grow.

Revised 1992 A Student Handbook  
Chemotherapy is a drug to treat cancer, which targets rapidly dividing cells. Unfortunately, these drugs don ' t discriminate between cancer and other types of cell which divide rapidly; this is why hair falls out in people undergoing chemotherapy. Chemotherapy is a medical treatment that is used in conjunction with surgery and/or radiation ...
