14.2 PARKING DESIGN CONSIDERATIONS minimums: Ideal slope for all parking area pavements is 2% Longitudinal pavement slope should be between 1%-5% Pavement cross slope should be between 1%-10% Storm water should be collected on the perimeter of parking areas with a minimum of 2% slope along concrete curb and gutter Curve radii The radius of a parking area entry or exit curb return should be at ...

Optimisation of Car Park Designs

The car park is the first building many visitors to a venue or a town/city centre come into contact with and first impressions count! Although the functional requirements of multi-storey car parks have a strong influence on the building form, they should be expressed in good quality, creative design which reflects their importance in creating a good first impression.
