The coordinate system. The default coordinate system in SVG is much the same as in HTML. It works as a two-dimensional x-y plane. The origin (where $x=0$ and $y=0$) is the upper left-hand corner. As we move right from there, x increases. As we move downward, y increases. Generally, units are measured in pixels.

Relative binding free energy (RBFE) calculations are a critical component of modern structure-based drug discovery efforts. Generally, the goal of these calculations is to estimate the difference of the standard binding free energies of two molecular ligands to the same receptor more directly than taking the difference of the corresponding absolute binding free energies (ABFEs). While a ...

Chapter 5 Gaussian Process Regression. Here the goal is humble on theoretical fronts, but fundamental in application. Our aim is to understand the Gaussian process (GP) as a prior over random functions, a posterior over functions given observed data, as a tool for scientific data modeling and surrogate modeling for computer experiments, and simply as a flexible nonparametric regression.
