Cells, Gels and the Engines of Life: A New Unifying ...

The real mechanism is the alternating structuring and de-structuring of water inside the gels. Phase transitions of gels can explain many of the cell actions and functions such as secretion, transport, movement, muscle contraction and even cell division. When cell division goes awry, the result is cancer.

This book challenges the current wisdom of how cells work. It emphasizes the role of cell water and the gel-like nature of the cell, building on these features to explore the mechanisms of communication, transport, contraction, division, and other essential cell functions. Written for the non-expert, the book is profound enough for biologists, chemists, physicists and engineers.--From ...
