Lemurs (/ ' l i : m ə r / LEE-mər) (from Latin lemures - ghosts or spirits) are wet-nosed primates of the superfamily Lemuroidea, divided into 8 families and consisting of 15 genera and around 100 existing species. They are native only to the island of Madagascar. Most existing lemurs are small, have a pointed snout, large eyes, and a long tail. They chiefly live in trees (), and are active ...

Lemur - Wikipedia

A special sense is one that has a specific organ devoted to it, namely the eye, inner ear, tongue, or nose. Each of the senses is referred to as a sensory modality . Modality refers to the way that information is encoded, which is similar to the idea of transduction.

14.1 Sensory Perception - Anatomy and Physiology | OpenStax

The Special Senses The senses connect humans to the real world, allowing them to interpret what is happening around them and respond accordingly. The color of the sky at dusk, the sound of laughter at a party, the scent of eucalyptus and pine, the taste of freshly baked bread—all would be meaningless without the senses. They not only provide pleasure, but warn of danger.

**Chapter 16 - Digestive System Processes and Regulation ...
Ganglion cell dendrites extend into the inner plexiform layer (IPL), a neuropil located on the outer side of the ganglion cell layer. The ultrastructure of ganglion cell dendrites is typical of dendrites seen elsewhere in the central nervous system, and they usually do not contain synaptic vesicles or any other presynaptic specializations.**
