Bioluminescence, or the ability of an organism to create light, is one of nature's most amazing phenomena, seemingly drawn more from science fiction than science and natural history. While relatively rare on land, bioluminescence is very common in the ocean, at least in the pelagic zone (the water column), where 80 percent of the animals that ...

Red light is quickly filtered from water as depth increases and red light effectively never reaches the deep ocean, meaning animals that live in deep water and are red are essentially invisible. An animal that relies on color for camouflage has to worry both about the color of the background and the color of the surrounding light.
