Chemical activity is a measure of the effective concentration of a species in a solution. For calculating the chemical activity of a solute, use the equation: For calculating the chemical activity ...

Structure-activity relationship - Wikipedia

Definition. The relative activity of a species i , denoted a_i , is defined as: $a_i = \frac{\mu_i}{\mu_i^\circ} = \exp\left(\frac{\mu_i - \mu_i^\circ}{RT}\right)$ where μ_i is the (molar) chemical potential of the species under the conditions of interest, μ_i° is the (molar) chemical potential of that species under some defined set of standard conditions, R is the gas constant, T is the thermodynamic temperature and e is the exponential constant.

Quiz & Worksheet - The Activity Series | Study.com

The structure-activity relationship (SAR) is the relationship between the chemical structure of a molecule and its biological activity. This idea was first presented by Crum-Brown and Fraser in 1865. The analysis of SAR enables the determination of the chemical group responsible for evoking a target biological effect in the organism.
