Electron Configuration Test Questions

Potassium (K) is originally in the electron configuration of $[\text{Ar}]4s^1$. To obtain a +1 charge it loses an electron, resulting in a configuration of $[\text{Ar}]$. Note that the ground state of magnesium will have twelve electrons (the same as its atomic number), while the ion will have ten. The question ...

help students understand the concept better.

Chemistry Electron Configuration Test Answers

Much of the study of chemistry involves the interactions between the electrons of different atoms. It is important, therefore, to understand the arrangement of an atom's electrons. This 10-question multiple-choice chemistry practice test deals with the concepts of electronic structure, Hund's Rule, quantum numbers, and the Bohr atom.
