Chemistry: The Molecular Nature of Matter and Change ...

Boiling water: Boiling water is an example of a physical change and not a chemical change because the water vapor still has the same molecular structure as liquid water (H_2O). If the bubbles were caused by the decomposition of a molecule into a gas (such as $H_2O \rightarrow H_2$ and O_2), boiling would be a chemical change.

Covalent or Molecular Compound Properties

Over four hundred years, scientists including Rudolf Clausius and James Clerk Maxwell developed the kinetic-molecular theory (KMT) of gases, which describes how molecule properties relate to the macroscopic behaviors of an ideal gas—a theoretical gas that always obeys the ideal gas equation. KMT provides assumptions about molecule behavior that can be used both as the basis for other ...

Properties of Covalent Compounds . Most covalent compounds have relatively low melting points and boiling points. While the ions in an ionic compound are strongly attracted to each other, covalent bonds create molecules that can separate from each other when a lower amount of energy is added to them. Therefore, molecular compounds usually have low melting and boiling points.
