Example: If the molarity of a solution is 0.30 M, calculate the molality of the solution knowing that the density is 3.25 g/mL. To do this problem we can assume one (1) liter of solution to make the numbers easier. We need to get from the molarity units of mol/L to the molality units of mol/kg.

The six-band CL-OCFD antenna was modelled hanging at 16.75 m (55 ft) above very poor city ground ($\sigma = 1$ mS/m; $\epsilon_r = 5$). In reality, the VSWR measured in the shack will be lower because of damping by the feed line losses. Here is the 4nec2 input file.
