For the set of elements in one set but not another, see relative complement.For the set of differences of pairs of elements, see Minkowski difference.. In combinatorics, a (r, r) difference set is a subset of size r of a group of order n such that every nonidentity element of G can be expressed as a product of elements of S in exactly r ways. A difference set is said to be cyclic, abelian, non-abelian ...

As applied to set theory itself, these ideas lead to a 'many worlds'— as opposed to the standard 'fixed universe'—view, inspired by Zermelo (1930), respecting the unrestricted, indefinite extendability of models of the Zermelo-Fraenkel axioms. Natural motivation for ('small') large cardinal axioms is thus provided.

basis. Omitting a vector from this spanning set will give a basis of \mathbb{R}^2 . A basis is a minimal spanning set. All bases of \mathbb{R}^n have size n . In a group, the analogue of a spanning set is called a generating set. Definition 1.1. In a group G , a subset $X \subseteq G$ is a generating set for G if every $g \in G$ can be written as a product of powers of elements taken from X :

Finite group theory as a discipline is (in my view) more about structural properties of finite groups in general, rather than of specific finite groups, which is what I'd like to see applied. As I said, if that's too picky and there isn't anything, that's okay. $\$ \endgroup \$$ - Alexander Gruber ? Mar 8 '13 at 8:22

In mathematics, an ordered pair (a, b) is a pair of objects.The order in which the objects appear in the pair is significant: the ordered pair (a, b) is different from the ordered pair (b, a) unless $a = b$. (In contrast, the unordered pair $\{a, b\}$ equals the unordered pair $\{b, a\}$.) Ordered pairs are also called 2-tuples, or sequences (sometimes, lists in a computer science context) of length 2.

The fundamental group $\pi_1(X)$ is especially useful when studying spaces of low dimension, as one would expect from its definition which involves only maps from low-dimensional spaces into X , namely loops $I \rightarrow X$ and homotopies of loops, maps $I \times I \rightarrow X$. The definition in terms of objects that are at most 2 dimensional manifests
