The authors reported an equivalent
performance of the media after 24 h of
incubation but a slightly higher sensitivity
for MRSA ID after 48 h. However, in this
multicenter study, a high proportion of
strains isolated in one laboratory in Vienna
required 48 h of incubation to generate
coloured colonies on either medium.

Clinical Microbiology Procedures Handbook - Google Books

The evolution of clinical microbiology is a response to clinical needs. This can take the form of a technical innovation garnered from the armamentarium of science in general or a reflection of advances in anti-infective therapy demanding recognition of microbial etiologies that now respond to therapeutic intervention.

Laboratory Procedures in Clinical Microbiology

The second procedure is quantitative and involves dilutions of antimicrobial agents, which are tested either in liquid or solid agar media. The latter is referred to as the minimal inhibitory concentration test.
