As per the journal entry I link below, sometimes 5% of PCR tests can be false positives. The UK's COVID-19 testing programme uses real-time reverse transcription polymerase chain reaction (RT-PCR) tests to detect viral RNA.<sup>1</sup> Public Health England reports that RT-PCR assays show a 95% specificity, meaning that up to 5% of cases are false positives

A new generation of bacteria grows in as short as 12 minutes or up to 24 hours or more, depending on the type of bacteria and the environment. Bacteria typically take 20 minutes to a few hours to reproduce. There are more bacteria in the world than there are grains of sand on all of the beaches of the world (if all the grains of sand are covered with bacteria).
