Embodied Simulations Are Modulated by Sentential Perspective

Purpose Verb learning is a critical but challenging part of language acquisition. Children with or at increased risk for developmental language disorder may particularly struggle with verb learning, and poor verb representations in turn may negatively impact children's language outcomes. Our goal is to examine literature on children's acquisition of verbs, identifying manipulable factors that ...

What is Cognitive Science?

" Force dynamics " refers to a previously neglected semantic category—how entities interact with respect to force. This category includes such concepts as: the exertion of force, resistance to such exertion and the overcoming of such resistance, blockage of a force and the removal of such blockage, and so forth.

William Croft - Publications

They argued that the perspective inherent in the verb (pushing is a movement away from the body and pulling is a movement towards the body) might not be sufficient to trigger an effective simulation. Alternatively, it could be argued that the perspective triggered by a verb depends on whether sentences use first person or third person agents and patients.
