Tooth enamel is one of the four major tissues that make up the tooth in humans and many other animals, including some species of fish. It makes up the normally visible part of the tooth, covering the crown. The other major tissues are dentin, cementum, and dental pulp. It is a very hard, white, off-white, highly mineralised substance that acts as a barrier to protect the tooth but can be

Jaypee Brothers Medical Publishers (P) Ltd

Dental plaque is a biofilm of microorganisms (mostly bacteria, but also fungi) that grows on surfaces within the mouth. It is a sticky colorless deposit at first, but when it forms tartar, it is often a pale yellow. It is commonly found between the teeth, on the front of teeth, behind teeth, on occlusal surfaces, along the gumline (supragingival), or below the gumline cervical margins ...
